

Automation Engineer

Department: Development
Reports to: Head of QA & Test
Location: Wetherby, West Yorkshire
Hours: Full Time (37.5 hrs per week)
Duration: Permanent

Summary

We require an experienced Automation engineer, who has worked within an Agile environment to support the development of our major product base in the UK. The initial approach will be to implement an Automation framework around one core product then transition to include the broader product application landscape and offer the opportunity to work with multiple technologies and product teams.

The successful candidate will work as part of a larger QA team and be responsible for ensuring that products meet the established standards of quality including reliability, usability and performance. It is important to provide tactful, insightful feedback to maintain a good working relationship with end users and other global product teams, therefore good interpersonal skills are an important aspect of the role. The Automation engineer should eventually become a knowledge expert in one or more areas of Proactis products.

You will be involved in developing automated test suites to drive the delivery of our core products. You will work alongside the business, identify potential issues and make improvements to the QA infrastructure, liaising with third parties to ensure the quality of product delivery meets the required standards

A strong team player who can interact and collaborate with all areas of product development including, third party suppliers, is essential. A confident self-starter with tenacity and confidence

You will be joining the organisation at an exciting time and be part of our formative approach to Agile practices.
